STATEMENT OF REASONS FOR ALLOWANCE

The claims now make it clear that the “determination” operation of the “power supply adjustment circuitry” is responsive to the “next sequential clock edge”. Therefore, it would be now understood that both the “power supply adjustment circuitry” and the “plurality of delay cells” are responsive to the “next sequential clock edge”. Further, Examiner points out that it is clear from the disclosure and the context (e.g., the generating operation in lines 12-13) that the “determine” step in line 9 is a conditional determination. In other word, the circuit is determining whether or not the stated condition exists and provides the “generate” step of lines 12-13 according to the determined condition. While the applied reference is seen to detect the state of sequential “delay cells”, it is not seen that such provides the operation in response to the “next sequential clock edge”. Since none of the cited prior art references are seen to disclose the recited structure, the case is in condition for allowance.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Terry Cunningham whose telephone number is 571-272-1742. The examiner can normally be reached on Monday-Thursday from 7:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner’s supervisor, Timothy P. Callahan can be reached on 571-272-1740. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
